Full Stack Developer

Education

University of Denver

Full Stack Web Development Boot Camp

January 2023

Projects

Dev.log [Demo Repo](#)

Social Network for Developers

January 2023

- Designed and implemented the back-end logic, including user authentication using JWT and encrypted password storage.
- Developed the logic for React components to send and receive data from the server as well as implemented Cloudinary to store media files.
- Built using MongoDB, Express, React, and Node.

DevDive [Demo Repo](#)

Recruitment Concept for Developers

December 2022

- Implemented user authentication and implemented user mutations for profile updates.
- Includes user verification using Cookies. Uses Bcrypt to store password securely and MySQL to store relational data.
- Built using MySQL, Express, Handlebars, and Node.

National Park Finder [Demo Repo](#)

Search for National Parks by State

November 2022

- Designed a polished user interface and wrote logic for fetching and storing data from APIs.
- Fetches data from the National Park services API and the Waze API.
- Incorporated local storage to store previous searches.
- Built using HTML, Bootstrap, Waze API, and the National Park Services API.
